

Sustainability Data in One Platform Accelerate. Track. Innovate.

Drive innovation and fast-track your journey to carbon neutrality and beyond. Kickstart your sustainable transformation with SDP now!

ACCELERATE

Accessing sustainability data doesn't have to be a painful and complicated process.

With its quick and straightforward implementation, VUPICO SDP allows you to easily gather, manage, enhance, and analyze sustainability data from all sources, empowering your organization to accurately measure your carbon footprint with ease. Harness granular data to gain meaningful results, and ACCELERATE your time to value with confidence.

TRACK

Build your sustainability reports with complete confidence on the TRACEABILITY and AUDITABILITY of ALL data with SDP.

Your sustainability data in one platform will not only ensure regulatory compliance for Scope 1, 2 and 3, but also empower you to make well-informed, data-backed decisions that bolster sustainability objectives across your value chain.

SDP comes with built-in data capability, keeping accurate and high-quality data at the forefront of everything we do is our top priority

INNOVATE

Experience a revolution in sustainability-driven innovation with SDP's simulation capabilities

SDP is a purposely built solution for uncovering hidden insights, through analytics, baselining and 'what-if analysis'. Simulate a change in your product, packaging, transportation or other processes impacting your carbon footprint to build a sustainable future.

Build a sustainable future by simulating a change in your product, packaging, transportation or other processes impacting your carbon footprint.

Utilize your sustainability data and build insights to drive your organization towards innovation and circular economy leadership using your sustainability data.

Are you a manufacturer, distributor, importer, or do you trade globally? If so, your firm is impacted by international legislation around CO2 emissions, water, palm oil, paper and packaging etc. Conditions imposed by regulations such as:

- Environmental Social Governance (ESG) is designed to streamline reporting, meet compliance, & maximize output.
- Extended Producer Responsibility (EPR) includes disposal, recycling, and routine reporting obligations.

VUPICO SDP enables organizations to execute their sustainable business strategy based on data and insights to drive sustainable transformation. We do this by providing sustainability data platform enabling businesses to collect data, manage and govern data, building a framework for efficient sustainability data models to support:

- Regulatory reporting,
- LCA / Carbon simulations to reduce environmental impact and drive cost efficiencies,
- Providing insights and analysis across your supply-chain ecosystems

HOW DOES IT WORK?

By capturing and integrating your raw data, VUPICO SDP can provide not only statutory reporting, but benchmarking, what-if analysis, to achieve cost reductions and positive environmental impacts according to your operation.

VUPICO SDP enables you to

- Gather, optimize, and integrate organizational datasets
- Access database of global standards and frameworks based on industry / country / state
- Optimise data quality and governance of your sustainability related master data
- Build regulatory and custom reports
- Establish benchmarking, forecasting and analytics based on business strategy, common local and international standards and local regulations

Life Cycle Assessment (LCA)

Business software application will measure the impact on the environment in each phase of the product life cycle, following a cradle-to-grave and cradle to cradle approach

- **Procurement:** Extraction of the raw materials that go into packaging and formulas
- **Manufacturing:** Impact of producing the products at your different factories
- **Logistics:** Distributing the products from any of your factories to the country/countries
- **Use:** The impact when the product is used by end consumers
- **Waste:** What happens to the product after it is no longer used in the country in which was sold

Use case scenarios or simulations with analytics inform the most effective and efficient pathway to improving environmental impact and building sustainable businesses.

Enabling companies to move beyond measurement our tool will simplify data collection, identify emissions hot spots and to achieve Scope 3 emission reductions.

Key Capabilities / Benefits

- Single place to collect, store, manage, govern and report your sustainability data
- Enhance organizational data management / quality while capturing sustainability data
- Quickly Establish EPR/LCA/Carbon reporting capability and benchmarking
- Save time on statutory reporting
- Improve visibility into the entire circular economy
- Evaluate your environmental impact and costs through simulation
- Align sustainability and business goals
- Ecolabeling / ESG rating and ranking / sustainability assurance
- Maintain positive customer and investor relations
- Identify the most efficient and effective sustainable practices

ABOUT US

VUPICO transforms data into business value.

Since establishment in 2015, we've grown a global team and refined a range of data and analytics solutions that strategically and systematically enhance the health, usability, and value of data across the enterprise.

VUPICO solutions are results-focused. Results go beyond the data we optimize, or the report we design, unlocking massive cost savings, reducing waste, and new opportunities for growth.
